## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-3 and 5-21 are allowed (renumbered as 1-20).
2. The following is an examiner's statement of reasons for allowance: The instant application is directed to an alarm system and method intended to trigger an alarm signal upon deviation from at least one environment-dependent reference predetermined for a specific environment. The alarm system comprising a sensor system that records a normal state of the environment when placed in the environment, the predetermined environment-dependent reference being comprised of at least a recorded sound/vibration image of the normal state of the environment in which the at least one portable unit is placed, the sensor system comprising an accelerometer/silicon crystal, microphone and temperature sensor, said accelerometer being triaxial. The closest prior art, Vock et al. (Pub # US 200580080566 A1), Script et al. (Pub # US 2004/0113778 A1), Shaffer (Pub # US 2001/0050612 A1), and Dildy (US Patent # 6,263,311 B1). Vock et al. discloses a smart sensor in the form of an adhesive bandage sticks to people and objects and wirelessly communicates with remote receivers. Internal detectors sense conditions associated with movement and/or the environment of the sensor. Script et al. disclose a portable security alarm system including a movement detecting and signal transmitting member for mounting on or proximate to the object whose movement is to be detected. Shaffer discloses a personal alert device for a user includes a portable housing to be carried by the user, a processor in the housing, and at least one sensor connected to the processor for detecting a possible physical threat to the user. Dildy discloses a method and system for providing security to a space by detecting an unauthorized presence in the space using voice recognition, wherein the system

Art Unit: 2612

stores a plurality of acceptable voice patterns is generated from sounds of authorized users and stored in the security system, and sounds in the space to be protected are detected and a current voice pattern is generated from at least one sound detected in the space is compared with entries in the stored voice lists to determine a level of difference or a level of similarity between the current voice pattern and the content of the voice list. The references, either singularly or in combination, fail to anticipate or render the above limitation obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
